Research Projects

Style Transfer for Brand Personality   Published
Extended Neural Machine Translation and text style transfer approaches for evaluating the transfer between different levels of Excitement (a dimension of brand personality). Introduced additional loss functions to optimize style transfer approaches on the evaluation metrics. The long-term aim is to alter the level of multiple dimensions of brand personality simultaneously.

Online Diverse Recommendations   Ongoing
The aim of this project is to provide personalized, diversified and summarized recommendations using online learning algorithms. It also deals with devising ways for evaluating the algorithms.

Understanding Documents Through Lens of Reader's Comments   Published
Devised a way for associating comments to the segments of the document and classifying them into categories in a hierarchical way. This will help authors in improving the content in future documents and making it more engaging.

Harvesting Knowledge from Cultural Heritage Artifacts in Museums of India   Published
Devised a method to build domain specific knowledge base from structured and unstructured data. Extracted triples are canonicalized to a standard taxonomy based on a combination of metric-based approach, taxonomy mapping and sequential clustering followed by an enrichment step.

Intent-Aware Contextual Recommendation System   Published
Guide: Dr. Iftikhar Ahamath Burhanuddin, Adobe Research
Created an intelligent system which is a combination of frequency and content based recommendation systems and keeps user's intent in mind while providing the recommendations.

Pattern Avoidance in Permutations   Bachelor Thesis
Guide: Prof. Benny George Kenkireth, Dept. of CSE, IIT Guwahati
Introduced a theorem and a conjecture to enumerate the distinct monotonically increasing or decreasing subsequence of length n+1 in a sequence of fixed length k.
